

JGI announces final round of 2022 Functional Genomics awardees

February 9, 2023

Left to right: Julia Baer, Aditi Bhat, Robert Campbell [above]; Andrew Gajigan, Betül Kaçar, McKenzie Kuhn, TaFrom left to right: Ali Boehm, Freddy Bunbury, Gina Chaput, Jessica Fletcher and Jonathan Fresnedo [above]; Pablo Iván Nikel, Ilya Finkelstein, Marie Sofie Møller [below]

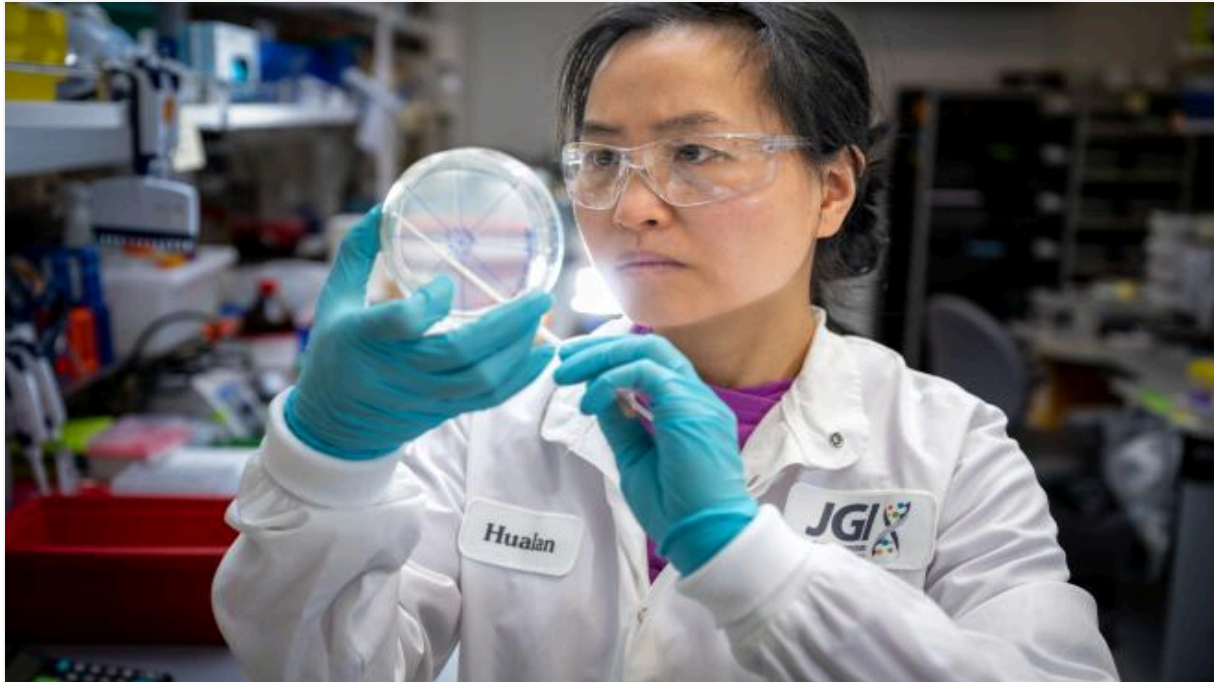

Twice each year, the JGI accepts proposals for state-of-the-art functional genomics research from potential users who need help translating genomic information into biological function. Through our [CSP Functional Genomics call](#), we look for projects

that will leverage the JGI's DNA synthesis and omics capabilities to enhance understanding of gene and genome function.

Below find a list of the final six researchers accepted for 2022. Proposals are accepted year-round; the next deadline is July 31. You can learn more about our [Community Science Program here](#).

Name	Institution	Proposal Title
Baer, Julia	University of California at Santa Cruz	The molecular evolution of bloom-forming toxic Pseudo-nitzschia in response to ocean warming
Bhat, Aditi	Brookhaven National Laboratory	Understanding the genotype-by-genotype basis of heavy metal tolerance in Medicago-rhizobia symbiotic interactions
Campbell, Robert	University of Tokyo (Japan)	Mining and exploiting histidine kinase sensor domains for construction of a massive catalog of green fluorescent protein-based biosensors for detection of biofuel, bioproduct, metal ion and metabolite targets
Finkelstein, Ilya	University of Texas at Austin	Beyond CRISPR: Functional metagenomic discovery of programmable anti-phage systems
Møller, Marie Sofie	Technical University of Denmark (Denmark)	High throughput screening of binding modules to improve the efficiency of enzymatic degradation of synthetic polymers and polysaccharides
Nikel, Pablo Iván	Novo Nordisk Foundation Center for Biosustainability (Denmark)	Paving the way towards new-to-nature fluorinated bioproducts

MORE DETAILS

CSP Functional Genomics

The CSP Functional Genomics call is to enable users to perform state-of-the-art functional genomics research and to help them translate genomic information into biological function.

[More details →](#)

Offerings & Capabilities

With a hands-on approach, we are able to offer our investigators unique strategies suited to a vast array of niche research specialities.
